## **CLAIMS 1-57 ARE PRESENTED FOR EXAMINATION**

Applicant's Information Disclosure Statement filed May 31, 2001 has been received and entered into the application. As reflected by the attached, completed copy of form PTO-1449, the cited references have been considered.

## Claim Rejection - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Robinson et al. (U.S. Patent No. 6,054,449), Lamuraglia (WO 01/24825 A2) or Allison (WO 01/35997 A2).

Robinson et al., Lamuraglia or Allison teach a method of PDT treatment of cardiovascular indications associated with occlusions (see Robinson et al. at the abstract and column 4, lines 55-56; Lamuraglia at the abstract; and Allison at the abstract) which comprises administering a photosensitzer drug which is encompassed by the present claims and which may not be a psoralen compound (see Robinson et al. at Figures 1-29, column 2, Table 1 and column 6, lines 10-67; Lamuraglia at page 16, line 16 - page 33, line 15; and Allison at the

abstract) and delivering an intravascular photoactivating light to the blood vessel at an activation wavelength that is encompassed by applicant's range of "about 390 to about 610 nm" (see Robinson et al. at column 23, line 56; Lamuraglia at page 2, lines 29 and 32; and Allison at page 13, lines 20-24).

The difference between the above and applicant's claimed subject matter lies in that the prior art fails to report a molar extinction coefficient of the photosensitizer drug at the activation wavelength of at least 1000 L cm<sup>-1</sup> M<sup>-1</sup>.

However, the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains because such coefficient is a physical characteristic of the photosensitizer drug and would have been present whether highlighted in the prior art or not.

Accordingly, for the above reasons, the claims are deemed to be properly rejected and none of the claims are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ray Henley whose telephone number is (703) 308-4652.
